

Guide to Fluorescence Literature

The major reason for presenting a bibliography of ultraviolet light, or which make only a casual graphy on fluorescence and phosphorescence reference to the fluorescence technique were can be summed up in one statement: A recent survey showed that twenty-two percent of all papers of this nature were included because chemical and clinical research was unintentionally duplicated. A comprehensive source potential for the problems discussed. Again, if pertinent papers were missed the authors book of fluorescence and phosphorescence would be grateful to have these omissions techniques is therefore needed not only to suggest ideas for future research, but to help called to their attention. The abbreviations of journal names employed in this Guide are those used by and thus to promote the development of both disciplines. Chemical Abstracts. Each paper has been given an alpha-numerical identification. Section A contains papers published in the years 1950-1953, section B the years 1954-1956, data which otherwise could be found only by section C the years 1957-1959, and section D the years 1960-1964. Section E contains papers, many difficult to find, and that old hands will find it a valuable papers missed in the original compilation.
