

Scotty, wheres my Warp Drive?

This is a culmination of a 50-year journey through the greatest period of scientific discovery, a time where young scientists grew up watching their dreams of space flight become a reality, and the science fiction of yesterday became the science fact of today. As an aerospace engineer I have helped put the Shuttle in space, the ISS in permanent orbit around our planet, satellites around Mars and get aircraft of all types off the drawing board and into the air. As an inventor I have solved a myriad problems facing some of this countrys biggest industries and patented many a means to bridge the gap between imagination and reality. In this book I combine all of my knowledge, expertise and experience to solve mankinds greatest problem, the dilemma of faster-than-light-travel. As I worked my way through the mechanics of Warp speed I discovered that everything I learned about the physics of the universe, and everything we think we know about the force of gravity, was wrong. As I applied good old fashion physics to my theories governing the fundamental forces of the universe I discovered something amazing along the way: the force we call gravity is a myth. Surprisingly I was not alone in this discovery. Allow me to take you on a journey through time and space with the help of Sir Isaac Newton, Albert Einstein and a host of other visionaries who laid the foundation for these ground-breaking theories about the dynamic forces at play in our universe. In this book I clearly explain how we can [and will] travel faster than light; not just a little faster--but many times faster. Without imaginary physics and faith in unseen dimensions I will shed a whole new light on the universe around you and why someday we can span the cosmos as easy as Gene Roddenberrys Captain James T. Kirk did aboard the Starship Enterprise.

Environmentally Friendly With These Green Energy Tips Something that several people don't realize about green energy is that it saves money on electricity for your home! While there are numerous benefits for the environment, going green
