

Reality Exploration and Discovery: Pattern Interaction in Language and Life (Center for the Study of Language and Information - Lecture Notes)

The twenty-five papers in this volume present current analyses of a variety of data and, more significantly, illustrate the various analytical tools available to linguists in the quest for deeper comprehension of the puzzles, questions, and problems they confront in natural language. The distinguished authors collected here explore interactions between linguistic structure and sound patterns across a diverse set of languages. The integrating theme of the volume is the influence of K. P. Mohanans philosophy of inquiry, derived not only from his rich body of diverse work but also from the fresh perspectives and intellectual vitality that he has shared with colleagues and students in a career spanning over three decades.
