

# Einstein Was Wrong!: But So Was Newton

Modern Physics is built on an erroneous foundation. If we are to take physics to a new level where gravity can be explained from an atomic/quantum perspective, then someone must boldly say, Einstein was wrong, but so was Newton. Because they both started with the same wrong premise, their theories of gravity were destined to fall short in any attempt to connect them to atomic/quantum processes. And the same false premise that stifled Einstein in his ability to connect the movement of planets and stars with the tiniest subatomic particles prevents modern physicists from explaining the fourth and final force from an atomic/quantum perspective. Alas, ...when one starts with a wrong premise, no amount of patching can right the problem. But all is not lost. By correcting Newtons mistake (the wrong premise), a new foundation for understanding the role of the atom in the momentum, relativity, and gravity of masses emerges in the form of two new theories: The Atomic Model of Motion (AMM) and The Galaxy Gravity Cycle (GGC). These two theories combine to paint the big picture of how atomic/quantum processes are involved in holding a galaxy together, keeping planets orbiting stars, and preventing people from floating off into space. This book is dedicated to Occams razor.
